

# How to get completed code for each sample project

- The starter code for each app can be found from the code craft github account <https://github.com/codecraftpro>
- Using github repos allows you to create ionic projects using codecrafts starter templates using the command line:-

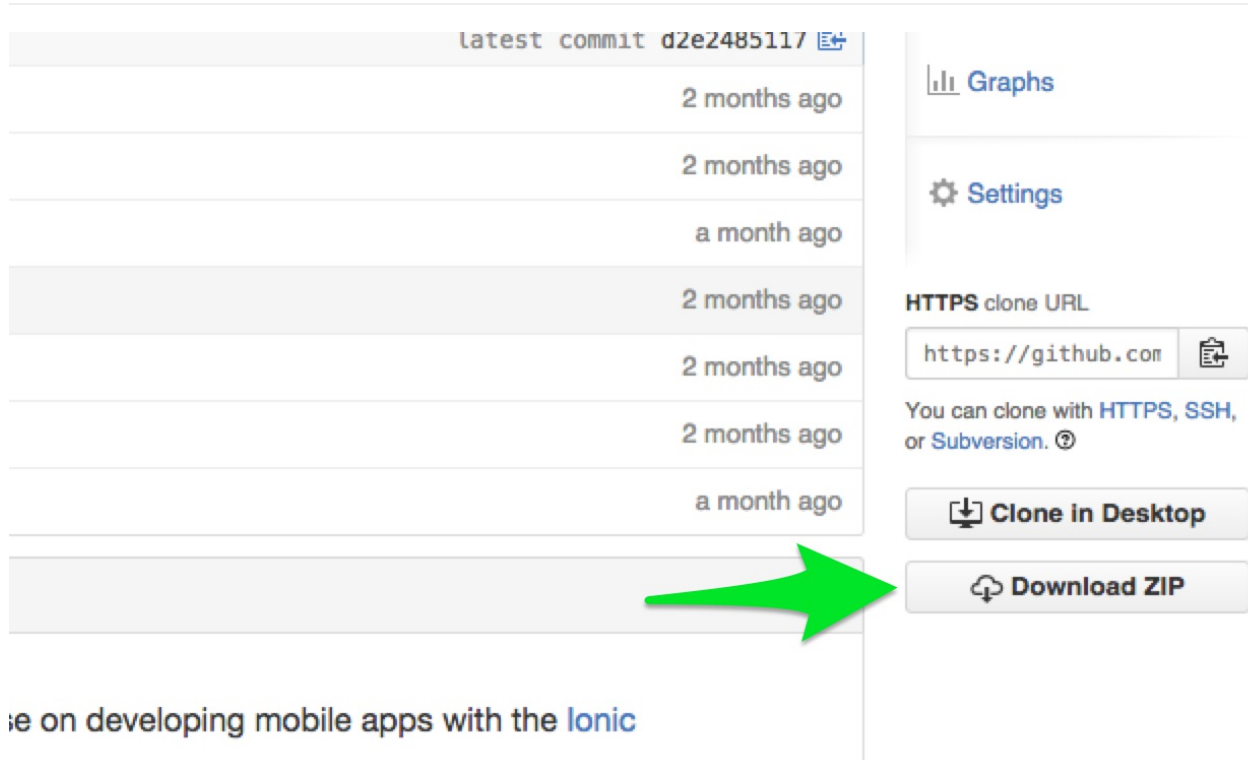

```
ionic start <name-of-project> <github-url>
```

- The ionic command line takes the **master** branch of the supplied repo and uses that as the template for your own ionic project.
- The completed code for each of our sample projects is in the same repo as the starter code but under a branch called 'completed'.
- There isn't any way to tell ionic to use the completed branch when creating a project from a github url so to create an ionic project using completed code we have to first download the completed code onto our computers.

## 1. Choose the completed branch

## 2. Download zip file to your computer

The screenshot shows a GitHub repository interface. On the left, a list of commits is visible, with the most recent commit highlighted. A large green arrow points from this commit to the 'Download ZIP' button on the right. The right sidebar contains options for 'Graphs', 'Settings', and 'HTTPS clone URL'. Below the URL, there are buttons for 'Clone in Desktop' and 'Download ZIP'.

[Graphs](#)

[Settings](#)

**HTTPS clone URL**

[Copy](#)

You can clone with [HTTPS](#), [SSH](#), or [Subversion](#). [?](#)

[Clone in Desktop](#)

[Download ZIP](#)

ie on developing mobile apps with the [Ionic](#)

## 3. Unzip and use in ionic start command.

```
ionic start <name> <path/to/unzipped/completed/folder/>
```
